ELECTRICAL USAGE – HOW TO AVOID POWER FAILURES.....

Each 10 x 10 booth comes with 500 watts of electrical – overloading electrical outlets can cause power outages – not just for you, but for your neighbor or an entire section of booths. Please be considerate of your fellow exhibitors and our customers - if you require more power than automatically comes with your booth – order additional through the designated service provider. Check right column for a list of power used by common appliances:

- One regular light bulb = 60 watts
- A microwave or 4 slot toaster = 650-1400 watts
- Coffee maker = 900 watts
- Space heater = 600 to 1400 watts depending on size
- Hand Held Steam iron = 800-1600 watts
- Flat Iron = 1000-1800 watts
- Fan = 100 watts
- Hot plate = 720 watts
- Laptop computer = 45 watts
- Radio = 40-60 watts
- Vacuum cleaner = 700-1400watts

DO NOT CONNECT ONE POWER STRIP TO ANOTHER – THIS MAY ALSO CAUSE ELECTRICAL FAILURES.
